ENERGY FUELS ENVIRONMENT 2020

Kraków, 16-18 September 2020

Institute of Thermal
Power Engineering
Tadeusz Kościuszko
Cracow University
of Technology

Conference

The aim of the conference is to uncover links between science and technology in the areas of energy, fuels and environment, as well as to become a venue, to create and develop relationships between different academic and technical institutions as well as wider industry. The sessions will be devoted to discussing the difficulties facing the sector, in particular how they are perceived in the economies and societies. Special attention will be paid to the climate change impact on the coal dependent economies.

VENUE

Krakow is the historical capital of Poland and the country's major touristic attraction. Museums, historical monuments, theatres and concert halls give wide possibilities to spend time in the city.

AGH University of Science and Technology is one of the top technical universities in Poland and renown in the international scientific communities. Faculty of Energy and Fuels is a relatively young but fast growing unit with wide international co-operation.

Thematic sessions

The sessions will discuss aspects of:

- ⬡ FUELS - new technologies and fuels in carbon constraint economies,
- ⬡ ENERGY - energy transition, new technologies and innovations in energy,
- ⬡ ENVIRONMENT - fuels and energy sectors impact on environment especially in relation to climate policies and new trends in environmental research.
- ⬡ ECONOMICS - economic efficiency of technologies as well as costs and prices of energy with relation to carbon dioxide emissions abatement policies
- HEALTH - sectors influence on human health,
- ⬡ SOCIETY - sectors perception in societies and acceptance of new technologies and climate policy;
- ⬡ POLICY - trends in energy and environmental policies and climate policy.
